

Project	Big Fish
Award rating	N/A
Yacht builders	McMullen & Wing
Interior designer	Ann Motion Design
Product	Dual motorised sunscreen and blackout roller blinds
System	Somfy motorisation integrated and controlled by BMS
Fabric	SP View® Bark & Thermo Block® Rata

The challenge

The requirement was for a full range of light control from glare reduction to complete blackout. The highest standards of aesthetics required that when the blinds are rolled up they will be completely out of sight. The technical requirement was for the blinds to rise and fall at all sea conditions without jamming, swinging, banging or making any noise.

The SP solution

The solution was two sets of motorised roller blinds installed above the bulkhead. Side channels were built into windows wooden frame allowing the blinds to be guided up and down. The bottom bars were fitted with soft brushes to assure blackout effect at any sea condition and smooth and quiet engagement. The end result was that by touching a control panel, the desired shading solution would appear quietly from nowhere.
