

Project	Genesis Energy Hamilton
Award rating	N/A
Location	67 Bryce St, Hamilton
Architect/Designer	Cheshire Architects
Head contractor	Hawkins Constructions
Product	Dual manual roller blinds, dual motorised roller blinds in the meeting rooms
System	SP45 & Easy-Link™, Agio™ automation integrated and controlled by AV system
Fabric	Ecoview® Met Ash & Thermo Block® FR Shell

### The challenge

Large bays of windows encircle the large working pods at this open plan Genesis Energy office. Glare reduction was paramount but ease of operation was equally important in the working brief.

### The SP solution

At points of extreme exposure double blind systems were used enabling blackout blinds to be used for maximising glare reduction. The bulk of the office is served comfortably by a 3% open sunscreen with metal backing to reduce heat gain and aid in glare reduction. Linking the blinds in each bay to work together makes for convenient operation.
