

Project	9 Gifford Street
Location	St Heliers, Auckland
Builder	Prestige Projects
Product	Chain and wire-free automated roller blinds
System	SP45
Fabric	SP View® Moonlight

### The challenge

The brief was to create a living space filled with natural light while allowing enough outward visibility to enjoy views over the Auckland harbour. This high quality home was constructed to maximise comfort and so automating the blinds in the living spaces was one of the requirements. This aspect presented a challenge as the electrical wiring design did not allow for power supply to the windows.

### The SP solution

The SP View® range of fabrics, constructed of PVC coated fiberglass yarn which provides stability and durability even in high temperatures, was the ideal solution as it provides 95% UV protection for furnishings and allows good outward visibility. To complement the crisp, fresh interior décor and to amplify the natural light, an off-white colour (SP View® Moonlight) was chosen. To overcome the absence of power supply to the windows, Acmeda Rechargeable Battery Operated motors were used. Charging the motors is hassle free and is easily done by the home owner.
