

Project	Madam Woo
Location	Takapuna
Designer	Nikki Wilson and Michelle Freeman
Product	Battery operated sunscreen roller blinds
System	Remote control Acmeda rechargeable wire-free motors
Fabric	SP View Char

### The challenge

The restaurant features a large glass panel front that required effective sun protection. The solution had to be easy to clean, stylish, and fit in with the relaxed, informal but sophisticated décor. Blinds needed to be operated by staff from a distance so guests sitting close to the windows are not disturbed during their dining experience.

### The SP solution

The SP View sunscreen fabric provides just the right amount of natural light but filters up to 95% of UV rays. By selecting a darker fabric a significant reduction in glare is achieved and the colour and texture of the fabric also fulfilled the design brief. The automated blinds allow the staff to operate the blinds using an easy to operate remote from anywhere in the restaurant so guests can enjoy the right level of sun protection without any interruption by staff. This practical and stylish solution was well suited for this contemporary restaurant and was achieved in close collaboration with the client.
