

Project	Mainstream Freight Head Office & Warehouse
Award rating	N/A
Location	Kiwi Rd, Otahuhu, Auckland
Architect/Designer	JWA Ltd
Product	Chain controlled roller blinds, motorised roller blinds in the high windows
System	SP45 chain control, remote control Somfy automation
Fabric	Ecoview® Revolver

The challenge

This office space required a VLT of less than 10 to create excellent working conditions with respect to glare reduction. But this was not the end of the brief. A shading coefficient of less than .60 was necessary to ensure the glazing was protected from any potential damage from heat build up. The entry foyer, being a double story atrium, required a high level installation with ease of operation.

The SP solution

A dark PVC free fabric (100% Trevira CS polyester) delivered a VLT of 10 with a shading coefficient of .55 and matched the interior décor perfectly. The high level blinds in the atrium were all automated with Somfy quiet motors which are controlled by a four channel remote held at reception.
