

Project	Novotel Auckland Airport
Award rating	N/A
Location	Auckland Airport
Architect/Designer	Warren & Mahoney
Head contractor	Hawkins Constructions
Product	Motorised roller blinds
System	Somfy integration to BMS and Agio™ RTS motorisation
Fabric	SP View® Boulder & Thermo Block® Scoria

The challenge

Lobby – very long glass panels in the lobby and restaurant allowed the sun to strike in, making it difficult for the reception desk and uncomfortable for the dining guests.

Conference rooms – glare control and total block out solution was required.

Twin rooms – the beautiful glass wall between the room and bathroom presented a privacy issue in twin share rooms.

The SP solution

Lobby – motorised sunscreen blinds were installed for functionality, and sheer curtains to soften the look.

Conference rooms – a dual solution of motorised blinds was introduced with a dark sunscreen to control the glare and total blackout blinds with side channels to ensure no light will get in. The blinds were integrated and control by a sophisticated automation system.

Twin rooms – a motorised total privacy blind was installed, concealed and covered by a valance 100 system. Privacy in the bathroom was now only a touch of a button away.
