

Project	Trustpower
Location	Tauranga
Designer	Warren and Mahony
Product	Sunscreen office roller blinds & boardroom blackout blinds
System	SP45
Fabric	Ecoview® Met Steel (3% open) and Thermoblock® FR Graphite

The challenge

The new Trustpower head office in Tauranga was built with a focus on Environmentally Sustainable Design principles. Therefore, the requirement was to source blinds that will not only be of environmentally friendly materials but will also positively impact the work environment by reducing commonly experienced issues of glare and heat.

The SP solution

The Ecoview® Met fabric range satisfied every need and standard required to overcome the challenge. Made from 100% Trivera CS, this fabric produces very low VOC emissions and contains no harmful substances. The aluminium backing on the fabric reflects a significant amount of the heat generated by New Zealand's harsh sun and helps create a comfortable work environment. The reduction in heat leads to less usage of air-conditioning, thus reducing carbon emissions. The combination of performance, functionality and aesthetics made Ecoview® Met Steel a perfect fit to compliment the design concept.
