care / operation

Welcome

Professional

Manufacturing quality products for over 60 years has helped SP Blinds amass valuable experience and knowledge specific to the demanding requirements of the New Zealand design market and unique weather conditions. We are the preferred supplier to many of New Zealand's leading architectural firms.

Reliable

We are reliable. We pride ourselves on it and want your experience with us to be a positive one. This exceptional service means you can depend on us to deliver accurate workmanship and an efficiently run project. Our website showcases many successful large commercial projects that have been completed throughout the country each year.

Precise

We are passionate about quality and take great pride in manufacturing some of the best blinds in New Zealand. We use advanced manufacturing technology, premium fabrics, and precision components to ensure a superior finish. Just as importantly, we foster a culture where our staff genuinely care about the accuracy and quality of every product that leaves our factory.

Sustainable

As a company, we strongly value sustainability as a core business principle, and this commitment underpins how we operate. We are proud to be a member of the New Zealand Green Building Council and actively provide practical advice to help you meet Green Building requirements, alongside offering a comprehensive range of products to support these standards.

masterspec

Thank you

for choosing the finest quality window décor from SP Blinds.

We aspire to making your life just a tiny bit more pleasurable every time you view or operate our products by providing the rewarding feel of premium quality and beauty.

To keep your blinds looking their best, we would like to provide you with some important care and maintenance information. Please take the time to read and follow these instructions and feel free to contact us at info@spblinds.co.nz if you have any further questions.

We are committed to using the highest-quality components and fabrics throughout the manufacturing process, and we rigorously test every product to ensure it is operating perfectly before it leaves the factory.

Caring for your blinds and fabrics

Cleaning and Maintenance

Category A Fabrics

For regular maintenance, remove dust using a vacuum cleaner with a soft brush attachment on low suction, or gently brush with a soft brush. When required, clean with a sponge or soft brush using mild soapy water. Rinse with clean water and leave the blind fully lowered until completely dry.

Category B Fabrics

For regular maintenance, remove dust using a vacuum cleaner with a soft brush attachment on low suction, or gently brush with a soft brush. The fabric can be wiped with a damp cloth. Do not wash with water or use strong detergents.

Category C Fabrics

Prevent dust build-up by gently vacuuming with a soft brush attachment. Do not wash or dry clean. Avoid soaking the fabric. Clean using a damp cloth only. Before spot cleaning, test a small, inconspicuous area with a mild detergent.

Category D Fabrics

Vacuum regularly. These fabrics can be wet cleaned using a mild detergent in lukewarm water. Gently sponge clean if needed, avoiding excessive rubbing. Do not use methylated spirits or dry-cleaning solvents.

Stain Removal

If stains cannot be removed using the above methods, we recommend engaging a professional blind cleaning service.

Mould Prevention

Under certain conditions, mould may develop on blind fabrics. This can occur when warm indoor air meets cold window surfaces, causing condensation. Moisture trapped between the window and the blind, combined with dust, can lead to mould growth over time.

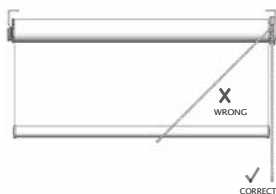

While many of our fabrics contain anti-mould treatments, these may not fully prevent mould in such conditions. To reduce the risk, we recommend managing indoor moisture levels, including the use of a dehumidifier where condensation is present

Operating guidelines

Chain-Operated Roller Blinds

Here's a few guidelines that will help maintain your blinds in good condition for many years:

- a. Correct Operation – it is important to always

operate your blinds when standing directly in front of the chain with a vertical movement, do not operate the chain at an angle (see above diagram). Pulling the

chain from the side may result in the chain rubbing against the fabric edge which can cause the fabric to fray.

- b. Blinds should never be down when the windows/doors are open. This may result in serious damage to the blind, including: fabric deterioration due to constant swinging and exposure to the elements, bottom rail being detached from the blind and various other issues.
- c. Should any repair be required to your blind we strongly recommend that it is carried out by one of our service technicians, or an experienced blinds installer.

Automated Roller Blinds

If you purchased automated/motorised blinds, please note the following:

- Connection of the hard-wired 230-volt blind motors to your power system and any repairs to these automated blinds must be performed by an electrician.
- Charge the wire-free battery-operated blind every 4-6 months, or when the motor head's LED light blinks with the motor running.
- Should an automated blind stop working, please check the following:
 - Make sure the 230-volt power supply to the blind is uninterrupted (isolating switch, switch boards, etc).
 - Make sure the wire-free motor is fully charged (the motor head's LED light is stable).
 - Check the remote control battery (where applicable).
 - If an electrical failure is detected please contact a certified electrician.
- For more information about your blinds, please go to www.spblinds.co.nz.
