SP Blinds
creative light control

Soft Light translucent fabric

Soft Light fabrics are designed to filter natural soft light into the room.
Some of the fabrics in this range provide privacy from the outside, which is extremely useful in today's compact urban living.

- Made of 100% Polyester with no PVC.
- Translucent opacity
- Some of the fabrics provide privacy
- Good UV protection – protects furniture and furnishings.
- Reduces glare.

Key to Specifications

OF – **Openness Factor** – this factor measures the proportion of holes in a woven fabric. This parameter, together with other technical properties of the fabric, should be considered when determining the degree of visibility, heat and glare control that the fabric offers.

AS/NZ 1530.3 – **Methods for Fire Tests** on Building Materials, Components and Structures. Part 2: Test for Flammability of Materials

As – **Solar Absorbance** – the proportion of solar radiation (heat) absorbed by the fabric. **A low figure** means the fabric absorbs little solar energy.

Rs – **Solar Reflectance** – this factor measures how much solar radiation is reflected by the fabric. **A high percentage** means the fabric performs well at reflecting solar energy.

Ts – **Solar Transmittance** – the proportion of solar energy (heat) transmitted through the fabric. **A low percentage** means the fabric performs well at reducing solar energy.

VLT % – **Visual Light Transmittance** – the percentage of visible light coming through the fabric, that can be seen by the naked eye. **A low figure** shows a very efficient fabric.

PVC free – **Do not contain PVC**.

OKEO-TEX – **The STANDARD 100 by OEKO-TEX®** is a worldwide independent testing and certification system for harmful substances in textile products.

GREENGUARD – This programme certifies materials for low chemical emissions, based on independent scientific testing and ongoing monitoring.

VOC – **Voletile Organic Compound** – these are organic chemicals that have a high vapour pressure at ordinary room temperature. This causes a large number of molecules to evaporate and enter the surrounding air. A fabric that has been certified for Low VOC Emissions has no, or very low levels of these chemicals.

RoHS / Lead free – **Restriction of Harmful Substances** – the RoHS directive issued by the EU aims to restrict the use of certain dangerous substances. Any RoHS compliant component is tested for the presence of Lead (Pb), Cadmium (Cd), Mercury (Hg), Hexavalent chromium (Hex-Cr), Polybrominated biphenyls (PBB), and Polybrominated diphenyl ethers (PBDE). For Cadmium and Hexavalent chromium, there must be less than 0.01% of the substance. For Lead, PBB, and PBDE, there must be no more than 0.1% of the material. Any RoHS compliant component must have 100 ppm or less of mercury and the mercury must not have been intentionally added to the component.

Trevira CS – **Trivera CS** is a high spec, eco-friendly type of man-made yarn, which is free of PVC, Halogen and Formaldehyde. It is inherently and permanently fire-retardant thanks to its molecular structure. It stands for textiles made of 100% flame retardant fibres and yarns by Trevira and their partners in the spinning and yarn finishing stages.
