

Environmental Policy

Sustainability Commitment

SP Blinds is committed to sustainability in its day-to-day operations, both by reducing its own carbon footprint and by supporting environmentally responsible solutions within the construction industry. Below are some of the ways we contribute to a more sustainable future.

NZGBC – Green Star Support & Professional Advice

As a member of the New Zealand Green Building Council (NZGBC) since 2008, SP Blinds actively participates in industry discussions and developments around environmental performance in buildings.

Through this involvement, we have developed strong expertise in the Green Star rating system. Our Commercial Fabric Specifier includes a range of fabrics that may contribute to Green Star points under Green Star Buildings NZ v1.0 tool.

We can provide supporting test data to demonstrate potential eligibility for:

- Low VOC emissions
 - Daylight glare control
 - Reduction of PVC use in buildings
-

Eco-Friendly Product Offering

SP Blinds offers fabrics tested for low VOC emissions, as well as optical and thermal performance.

We prioritise sourcing from suppliers who:

- Test products against recognised international standards
 - Operate in an environmentally responsible manner
-

Blinds – Supporting Energy Efficiency

Window coverings play an important role in improving the energy efficiency of a space. The use of sunscreen or blackout blinds can:

- Reduce heat gain from sunlight and improve insulation in colder conditions
 - Lower energy consumption by reducing the need for air conditioning and heating
 - Minimise glare, creating a more comfortable working environment
 - Provide flexibility compared to fixed glazing, allowing natural light to be used instead of artificial lighting
-

Durability – Reducing Waste

Lower-quality products often require frequent replacement, increasing landfill waste.

SP Blinds manufactures products to high industry standards using premium materials and precise processes. This ensures our blinds maintain their appearance and performance over time, reducing the need for replacement and supporting long-term sustainability.
